

AI Property Development MVP

A simple first version that builds on the current AI Studio prototype and turns uploaded property documents + a developer brief into a useful concept pack.

Pilot: one real stand

Goal: prove workflow

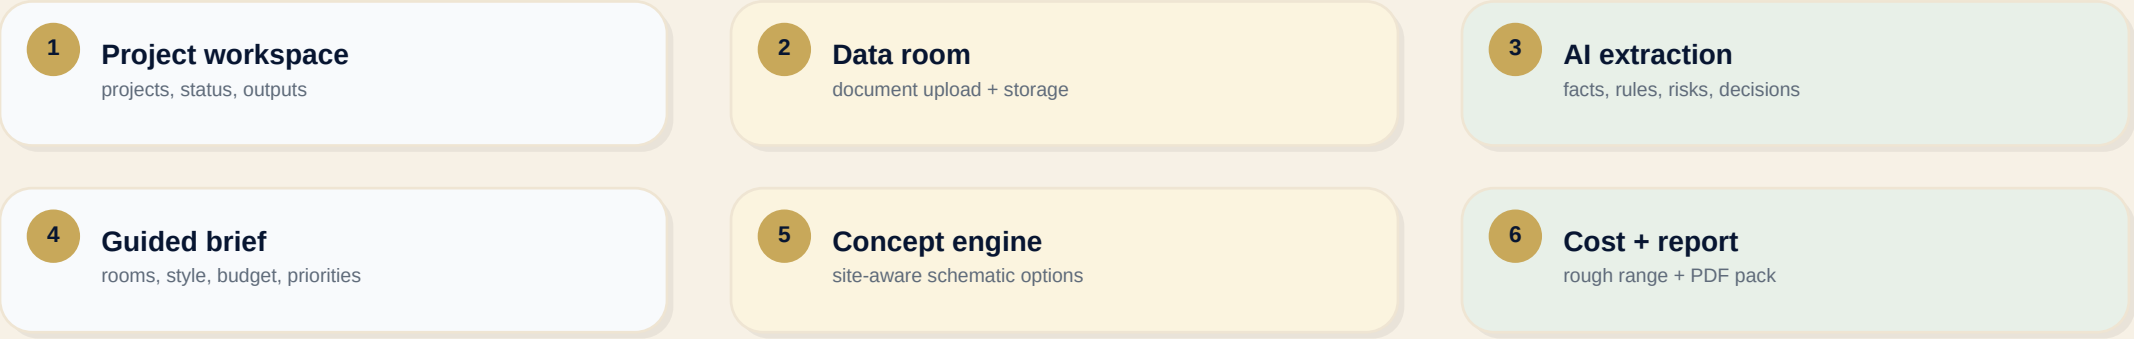

MVP promise

Upload docs + complete a guided brief -> AI extracts rules, creates 2-3 concept options, estimates rough cost, and exports a PDF concept pack.

Simple user flow

What the first version includes

Output pack

extracted rules

site/brief summary

2-3 concept options

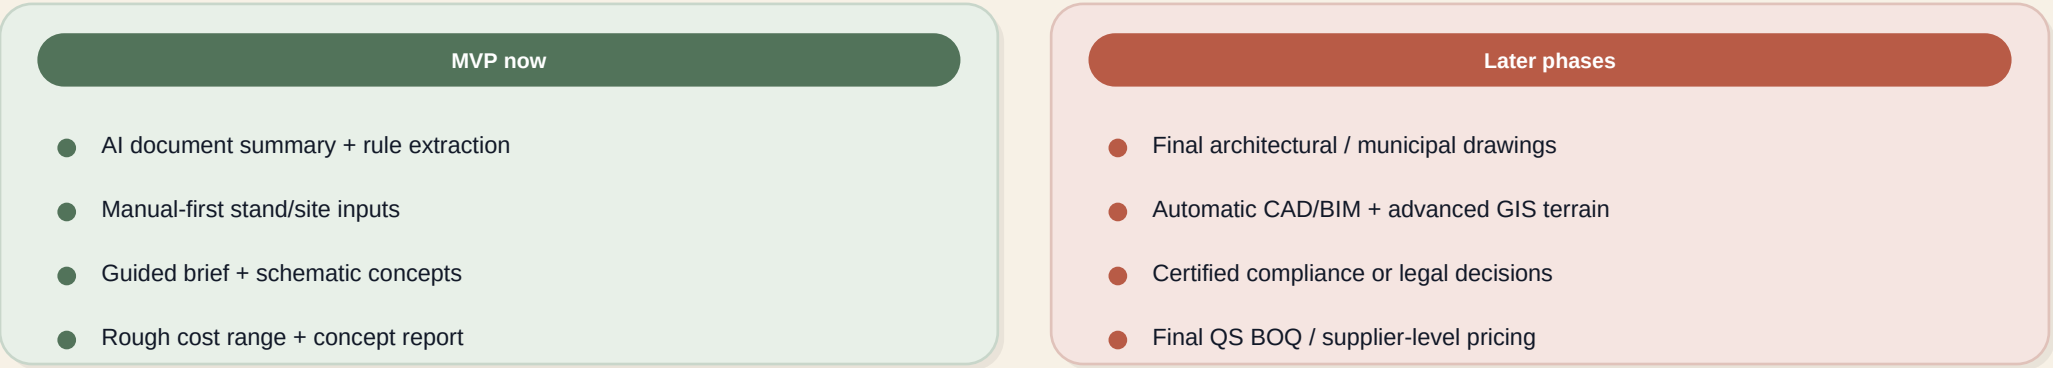

rough cost range

next decisions

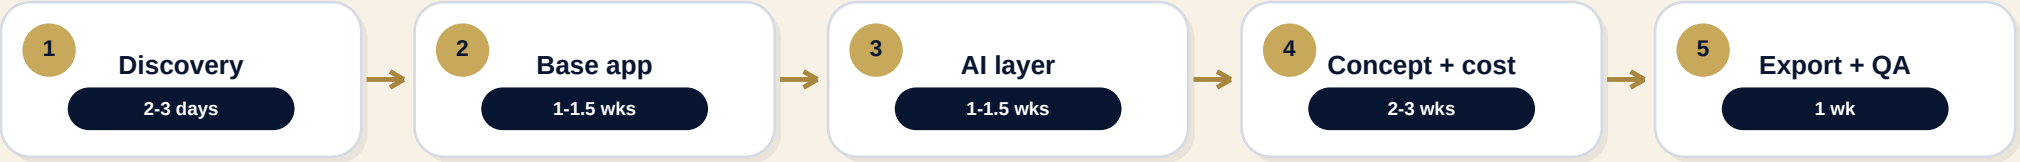

Scope, roadmap, and next step

Keep the first build realistic: prove the concept workflow first, then expand into advanced layout, estate intelligence, CAD, and BOQ features.

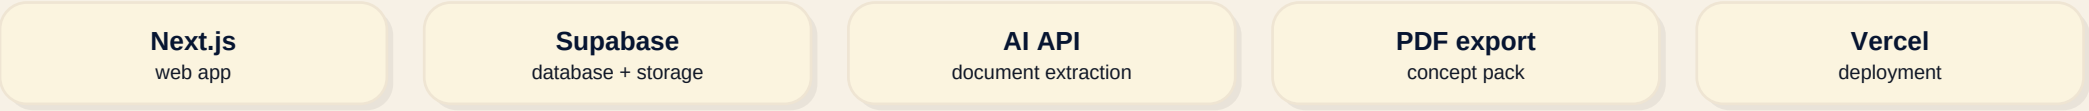

Scope boundary

Recommended delivery path

Production approach

Suggested next step: approve a short discovery/planning milestone on Upwork first. Then finalise the MVP build estimate, timeline, and milestones.
